Components & Variants

What we will learn today?

1. Introduction to Components
2. Aspects of a Good Component
3. Variants in Figma
4. Why Components & Variants Matter ?
5. How to Create Components
6. How to Create Variants
7. Real World Example

Introduction to Components

Introduction to Components

- Components are reusable design elements — like building blocks for your design.
- You design it once, use it everywhere.
- If you change the Main Component, all copies (instances) update automatically.
- Example:
  - Buttons
  - Inputs
  - Cards
  - Navbars

Aspects of a Good Component

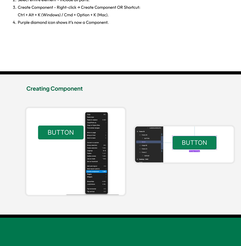
Aspect	What It Means
Reusable	Used multiple times without redesigning.
Consistent	Keeps same look & style across screens.
Flexible	Resizes or adjusts easily without breaking.
Organized	Clear naming and grouping in your Assets.
Supports Variants	Can handle different states (hover, disabled, etc.).

Variants in Figma

Variants in Figma

- Variants are different versions of the same Component, grouped together.
- Keep your design system neat and manageable.

- Examples:
  - Buttons: Primary, Secondary, Hover, Disabled
  - Inputs: Normal, Focused, Error
  - Toggle Switch: On, Off



Why Components & Variants Matter?

Why Components & Variants Matter?

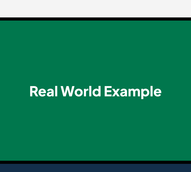
- Saves time – no need to redesign common elements.
- Keeps design consistent – no mistakes or mismatched styles.
- Easy handoff to developers.
- Essential for scalable projects or design systems.

How to Create Components

How to Create Components

1. Design your element – e.g., Button with text & background.
2. Select entire element – include all parts.
3. Create Component – Right-click → Create Component OR Shortcut:
   Ctrl + Alt + K (Windows) / Cmd + Option + K (Mac).
4. Purple diamond icon shows it's now a Component.

Creating Component



How to Create Variants

How to Create Variants

1. Select your Component.
2. Duplicate and edit versions.
3. Select all → Right-click → Combine as Variants.
4. You'll see all versions grouped with easy switching controls.

Creating Variants
