- Best Practices for Handoff
- What Developers Expect
- Key Takeaways

What is Design Handoff?

What is Design Handoff?

The process of passing design files and information to developers so they can start building the product.

Why it matters:

- Ensures accurate implementation
- Saves time and prevents confusion
- Bridges design and development

Key Elements of Design Handoff

Key Elements of Design Handoff

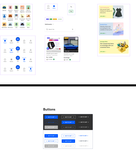
1. Design Files – Organized, final UI designs
2. Assets – Exported images, icons, logos, etc.
3. Design Specs – Sizes, padding, spacing, fonts
4. Style Guide – Colors, typography, components
5. Prototype Links – Show intended interaction/flow

Figma Features That Help Handoff

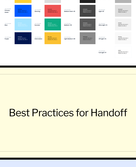
Figma Features That Help Handoff

- Inspect Panel – Developers can see code snippets (CSS, iOS, Android)
- Export Assets – Mark elements exportable
- Commenting – Communicate with devs directly in Figma
- Design Systems – Keep things consistent

Inspect Panel – Developers can see code snippets (CSS, iOS, Android)



Export Assets – Mark elements exportable



Commenting – Communicate with devs directly in Figma

Design Systems – Keep things consistent

Best Practices for Handoff

Best Practices for Handoff

- Name layers clearly
- Group components logically
- Keep spacing/padding consistent
- Use Auto Layout for flexibility
- Document interactions (hover, click, transitions)

What Developers Expect

What Developers Expect

- Clear structure
- Access to right format
- Responsive design behaviour
- Component logic (e.g., states of a button)
- No guesswork

Summary

Summary

- Design Handoff = Clear communication between design & development
- Tools like Figma make it smooth
- Clarity, consistency & documentation = KEY
